6. **Hasil yang ditargetkan** : Model Tranfomasi Ruang Publik
7. **Institusi lain yang terlibat** : -
8. **Keterangan lain yang dianggap perlu** : -

ABSTRACT

Since the Kampung Wisata Jodipan (KWJ) has been declared as thematic tourist village that is open to the public, a variety of village themes have emerged that offer uniqueness, distinctiveness, both based on village potential and those that do not. The arrangement of the urban villages is indicated to trigger changes in the public space inside. In addition to spatial, changes in the function of this space encourage changes in local people's activities and especially the quality of existing public spaces. This change is certainly one of them indicated as changes in the physical settings of public spaces, the next one being an approach in answering the problems in this study. This research was conducted with in-depth observations, observations, supported by measurements, questionnaires and direct interviews with residents, visitors and the public about public spaces. Data processing is done by SPSS, Linkert scale, mean factor to get the main factor in the formation of public space in Malang city KWJ. The results of data processing are juxtaposed with measured parameters of public and private spaces in settlements. With this research, it is expected to be able to find a village themed arrangement model (thematic) while still paying attention to the quality of the public space and private space of the community along with anticipation that must be done.

Keywords: Public Space, tourism, transformastion.
